

The Shroud of Turin is one of the most studied artifacts in current history. We cannot explain it, nor reproduce it. All research on it has disproven the possibility that it is forgery made by human hands. We will study the science study done in 1978 and touch on the history briefly.

This will be a Powerpoint presentation.

It has been said that Middle Ages had little or nothing accomplished during that time. However things we use today were invented then: glasses, printing press, scissors and buttons for instance. We will discover the many items invented in this time.

This will be a Powerpoint presentation.

It has been said that the Middle Ages had little or nothing accomplished during that time. Aristotle was the scientific expert for 1500 years. Using him for a basis we will study how he was proven wrong. We will also consider the Arab contribution to science and astronomy. We will consider the start of chemistry (alchemy). In short a great deal of science and mathematics.

This will be a Powerpoint presentation.

Bush flying occurs in extraordinary places. We will first try to define what we mean by bush flying. We will follow new pilots (through some BBC videos) trying to get their first job as a pilot in Southern Africa (the Ocovango delta). They will fly in some rough terrain as we will see others do. It will be a new set of challenges for them if they get the job.

This will be a series of vides with occasional Powerpoint lectures.
